

Nakama

Stop shared work in private ChatGPT chats. Run one agent workspace for your team.

Nakama gives each team or each client agents, memory, and channels on one platform.

getnakama.cloud · demo.getnakama.cloud · Open source

PROBLEM

Teams need more than ChatGPT. Agent tools for one operator do not scale.

1 Many private chats

Each person uses a private ChatGPT chat. The team does not share agents, memory, or control.

2 Tools for one operator

Tools such as OpenClaw and Hermes work on one machine for one person.

3 Teams and agencies need more

They need many users, many clients, channels, and roles.

WHO CAN USE NAKAMA

Nakama serves two types of buyers.

Team lead

Operations, support, and founders need shared agents on the web, Telegram, and WhatsApp. They do not need only personal ChatGPT.

Agency or freelancer

One platform can hold many client organizations. Each client has isolated agents, memory, and channels.

SOLUTION

Nakama is a multi-tenant platform for AI agents.

You can install Nakama on your servers, as with WordPress.
You can also use managed hosting.

- One server can serve many organizations.
- Agents have identity (soul), memory, skills, and tools.
- Channels connect to the tools that teams already use.
- Roles include admin, member, and viewer.

FEATURE 1

Organizations and roles

Nakama is multi-tenant by design.

- Organizations are tenants.
- You can send invites and assign roles: admin, member, viewer.
- Profiles, sessions, automations, tools, and usage stay isolated by organization.
- Agencies: One installation can serve many client workspaces.

FEATURE 2

Souls and memory

Agents keep context across sessions. Agents do not use only temporary chats.

Operating rules

MEMORY.md

Facts across sessions

Team knowledge increases over time. Client organizations stay separate.

FEATURE 3

Channels

Use the channels that your team already uses.

- Web dashboard and CLI
- Telegram, WhatsApp, and Discord
- The same agent and the same soul operate across channels.
- Automations and tasks do recurring work.

Nakama agents can do these tasks:

Connect external apps with Composio. Assign skills and tools to each profile.

1 Documents

Connect Google Drive, Docs, and Sheets.
Read and change documents.

2 Calendar

Create, change, and review calendar events.

3 Email

Read email. Write and send replies.

4 Short video

Configure an agent to edit short videos.

5 Coding agent

Start Codex, Claude Code, OpenCode, or
Cursor Agent. Write and change code,
including Nakama itself.

6 Automations

Schedule agent work on a timer for
recurring tasks.

COMPARISON

Nakama is not only a chatbot. Nakama is not a tool for one operator.

Function	ChatGPT / Claude Team	OpenClaw-style	Nakama
Shared team agents	Limited	One operator	Yes
Multi-tenant orgs	No	No	Yes
Channels	Limited	Often available	Yes
Durable memory	Chat history	One machine	Org and profile
Deployment	SaaS only	One local system	Docker or Cloud

Nakama is a platform for team agents.

EVIDENCE

Nakama is open source. A public demo is available.

START A TEST

Open the public demo. Install Nakama with Docker when you are ready.

1. Public demo

demo.getnakama.cloud

demo@getnakama.cloud / demo1234

3. Managed hosting

If you do not want to install Nakama, use

getnakama.cloud.

2. Install with Docker

```
docker pull ghcr.io/ahmadrosid/nakama:latest
docker run -d -p 4310:4310 \
  -v nakama-data:/nakama/data \
  --name nakama \
  ghcr.io/ahmadrosid/nakama:latest
```

```
# Open the dashboard: http://localhost:4310
```
